Summary

Fullstack engineer and technical founder who ships production systems end-to-end, from infrastructure to the consumer apps built on it, serving thousands of users and processing millions in transaction volume.

Work Experience

Challenger Fantasy [\[Website\]](#)

Technical Founder

Chicago, IL
Jun 2025 - Present

- Built and launched a fantasy sports platform end-to-end as technical founder; designed the data infrastructure, REST API layer, CI/CD, and React Native mobile app currently serving 83 monthly active users.
- Engineered a serverless real-time draft engine using **Cloudflare Durable Objects** and **WebSockets**; includes matching concurrent users into draft lobbies, each managing strongly-consistent turn-based state.
- Designed a REST API and data layer; used edge caching, summary tables, and materialized views to reduce P99 response times **92.5%** (from **~8s** to **~600ms**).
- Built an ETL pipeline with **Google Cloud Run** for processing 19 years of historical sports data with daily refresh jobs and idempotent upserts to handle upstream data corrections.
- Established a monorepo with end-to-end type generation from database schemas to API clients, prioritizing maintainable and scalable code across the stack.

Mamo.bot [\[Website\]](#)

Fullstack Developer

Remote
Mar 2025 - Jun 2025

- Partnered directly with UX designers to implement a production onboarding and deposit flow, achieving \$1.3M in throughput.
- Set up Sentry error monitoring on 5 deployed services and led bug triage/prioritization post-launch.
- Implemented a multi-step onboarding flow using React that dynamically branches logic to automate smart contract deployment, sign transactions, and skip steps based on user context.
- Reverse-engineered a third-party OAuth integration to build a custom authentication layer, serving as both a spam-prevention barrier and access-management system.

Tribes Inc. [\[Website\]](#)

Fullstack Developer

Remote
Nov 2024 - Mar 2025

- Built a real-time chat engine (Socket.io/Node.js) with rich-media features including reactions, GIFs, and metadata processing for Open Graph/Twitter link previews.
- Developed a cross-platform notification system (Firebase Cloud Messaging + Push API + Telegram bot), integrating multiple systems into one automated alert pipeline.
- Migrated 8 services to modular Turborepo packages, reducing build times by 70%.
- Contributed [2 features](#) to an open-source AI agent framework (Eliza), expanding integration and test coverage.

Freelance

Fullstack Developer

Chicago, IL
Jan 2024 - Nov 2024

- Developed 3 independent software projects from concept to production, securing **\$42.5k** in grant funding.
- Open-sourced an **SDK** adopted as a company's official developer tool, reaching **1.2k** weekly npm downloads.

Deloitte Consulting

Consulting Analyst

Chicago, IL
Aug 2022 - Jan 2024

- Consulted across 6 global companies on large-scale software migrations while maintaining 87% utilization.
- Built Power BI dashboards and Excel resource models to translate raw client data into analytical frameworks.
- Condensed analysis into key findings and decision-ready recommendations for executive stakeholders via PowerPoint.

Education

University of Tennessee, Knoxville, BS in Business Analytics & Statistics

Aug 2018 - May 2022

- **GPA:** 3.9/4.0; **Relevant Coursework:** Data mining, information science, database design, and programming fundamentals

Skills

- **Languages:** Typescript, Python, SQL; **Web Frameworks:** Express, Hono, FastAPI, Next.js, React.js
- **Skills:** REST API design, GraphQL, ETL data pipelines, CI/CD, serverless architecture, real-time systems
- **Infra/Tools:** Cloudflare Workers, Docker, Git, Bash, GitHub Actions, PostgreSQL, Redis, Sentry, Fedora Linux, GCP
